#AzConfDev

Agenda

Microsoft Azure Overview

Business request

Azure App Service

Azure Traffic Manager

Azure CDN

Other useful Azure services

A stylized world map with a light gray background. Landmasses are shown in dark gray. Numerous orange dots are scattered across the map, representing the locations of cloud providers. There is a high concentration of dots in Europe, particularly in Western and Central Europe. Other dots are visible in North America, South America, Africa, Asia, and Australia. The text '2nd' is prominently displayed in a large, bold, orange font, partially overlapping the map.

2nd

LARGEST PUBLIC CLOUD PROVIDER

61+

REGIONS WORLDWIDE

A stylized world map with landmasses in black and oceans in light gray. A complex network of orange lines, representing fiber optic cables, is overlaid on the map. These lines are most dense in North America, Europe, and East Asia, with many orange dots indicating connection points. The lines cross the Atlantic and Indian Oceans, showing global connectivity.

61+

REGIONS WORLDWIDE

130K+

MILES OF FIBER AND SUBSEA CABLE

REGIONS WORLDWIDE

130K+

MILES OF FIBER AND SUBSEA CABLE

150+

EDGE SITES

100 Gbps - fastest private connection

1.6
million miles of
fiber

-  Datacenter
-  CDN Locations
-  Edge Node
-  Internet Exchange
-  Terrestrial Network
-  Subsea Network

Virginia (2014)

Virginia (2017)

Why Azure

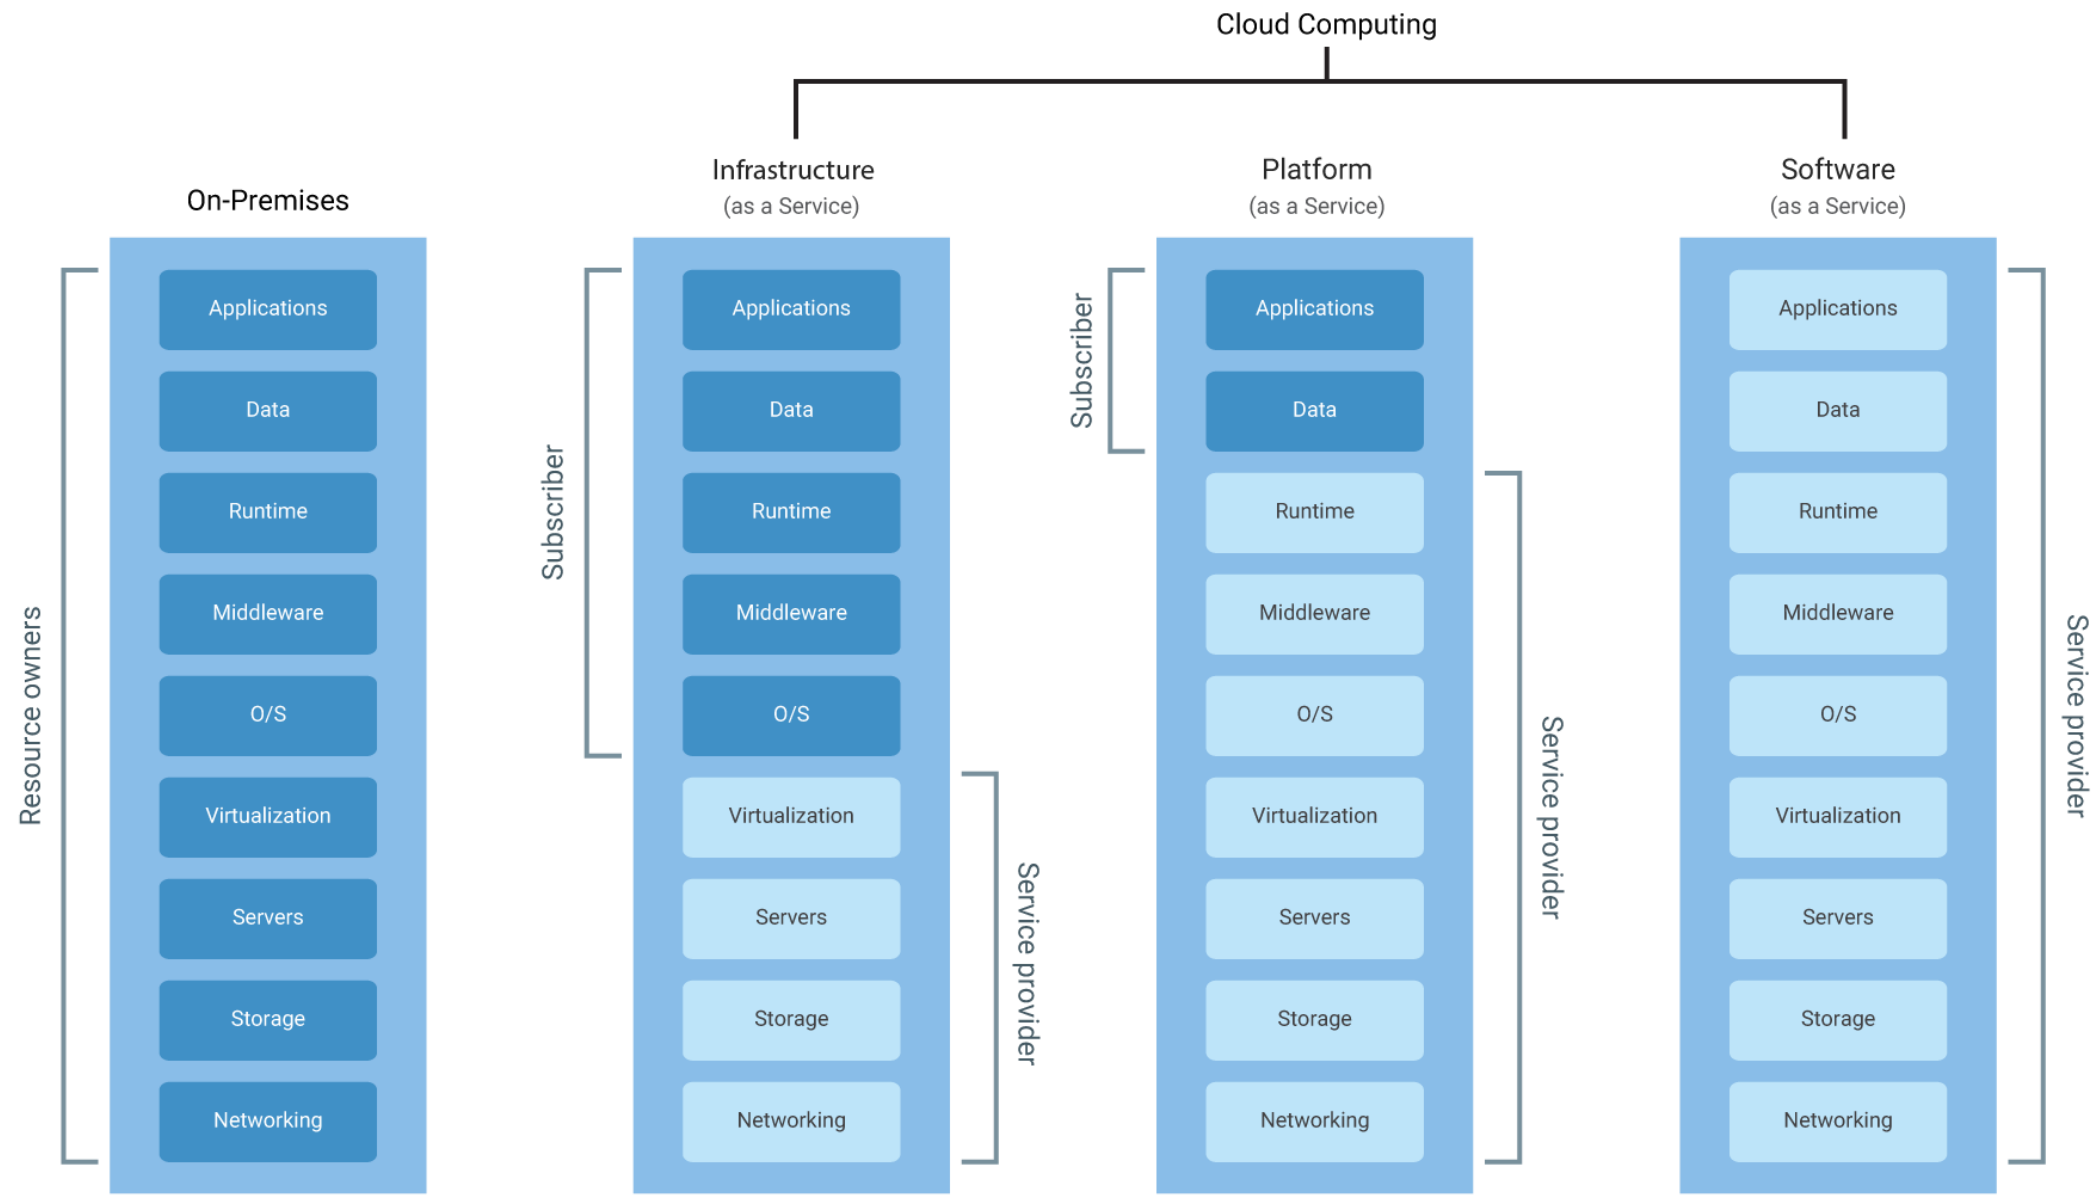

Huge demand from customers. Starting now in some geography's but huge across the US and Europe.

Fun to work with! Every project is a different project and we can use new services and/or new feature of already existing services

Pay for what you use

Cloud Models

The Challenge?

Customer Business request

Host our global customer experience Web Application and services layer for mobile apps

Customers in Europe, USA and Asia

Fast response times across all regions on the globe – Currently app is suffering from timeouts...

Scalable solution when needed

Low maintenance

Azure App Service

#AzConfDev

Azure App Service

Scalable platform to host Web Application and REST services

Open platform for many different development languages: .Net, .Net Core, Java, PHP, ...

Windows or Linux support

Integration with Development tools like VS Code, Visual Studio, Eclipse, Azure DevOps, GitHub, ...

Support for custom domains – mycompany.com

App Service USP

Enterprise-grade apps

Global data
center footprint

Hybrid support

AAD integrated

Secure + compliant

Fully managed platform

Built-in auto scale
and load balancing

High availability
with auto-patching

Reduced
operations costs

Backup and
recovery

High productivity development

.NET, Java, PHP, Node,
Ruby, and Python

Staging and
deployment

Testing in
production

App gallery
marketplace

App Service features Highlight

WW Datacenter Coverage

Azure Functions and WebJobs

Custom domain names / SSL

Autoscale

Deployment Slots

Easy setup for CI/CD with Azure DevOps and other tools

Integration with other Azure Services like: CDN, Traffic Manager and Front Door

App Service Plan Tiers

Free/Shared

- 60-240 Compute Minutes / day
- Custom domains (Shared only)

Basic / Standard / Premium / PremiumV2 / PremiumV3

- 3-10-30 Instances
- Traffic Manager (Standard, Premium, PremiumV2 and PremiumV3)
- Deployment Slots (Standard, Premium, PremiumV2 and PremiumV3)
- Backups (Standard, Premium, PremiumV2 and PremiumV3)

Isolated – App Service Environment (ASE)

- Up to 100 Instances
- VNet Isolation

App Service Availability

AZURE APP SERVICE (MULTI-TENANT)

Get your Web, API, or Mobile App created in seconds in the cloud. We provide the infrastructure, you provide your application code.

APP SERVICE ENVIRONMENT

Run your apps in virtual network at high scale. Manage all of the resources behind your public endpoint creating an isolated environment specifically for your organization.

AZURE STACK*

Leverage cloud innovations in on-premises infrastructure. App Service on Azure Stack brings the power of Azure App Service to your own data centers.

App Settings

Applications settings and connections strings can be configured in the Azure Portal

Connection strings

ApplicationContextDB	lows.net,1433;Initial Catali ×	SQL Database ▼
<i>Name</i>	<i>Value</i>	SQL Database ▼

App settings

WEBSITE_NODE_DEFAULT_VERSION	0.10.32
ITEM_COUNT	13
API_KEY	waasowu1229847pedju
<i>Key</i>	<i>Value</i>

Autoscale

Scaling rules: Schedule or Based on performance metrics

Performance Metrics

CPU

Memory

Queue

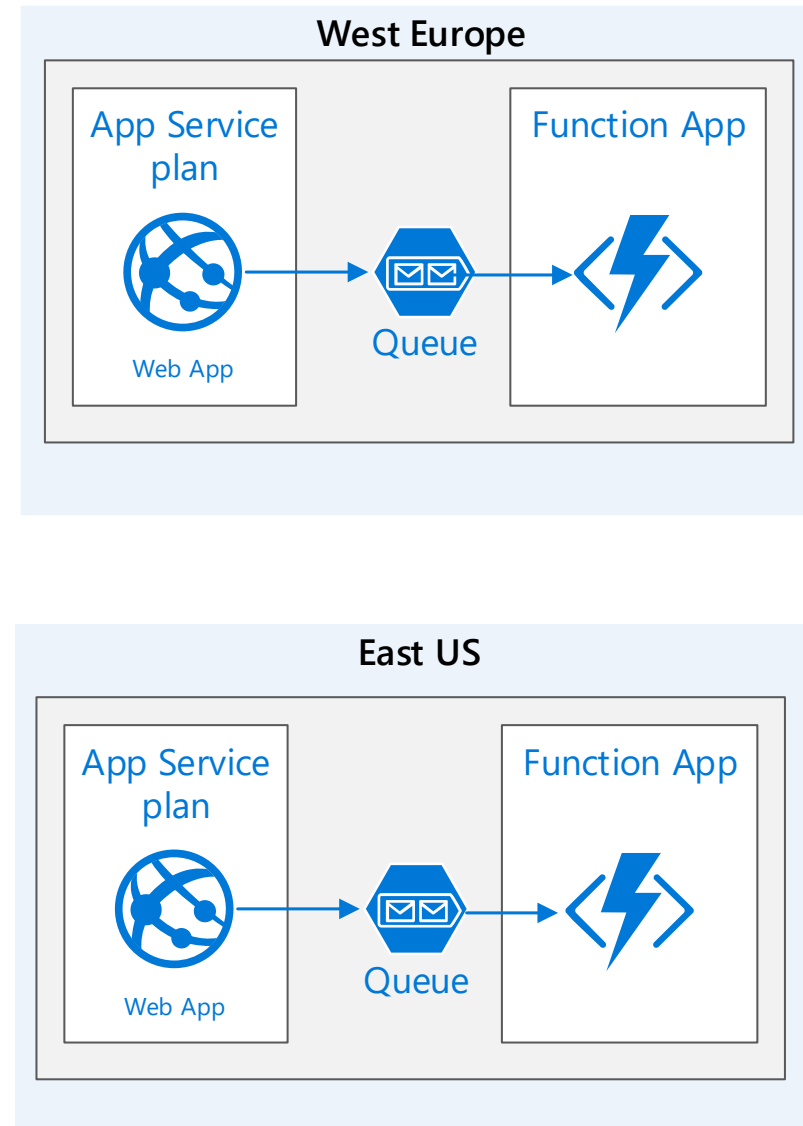

Can setup a Min and Max instance threshold

Demo

Creating and deploying a Web App

Current Status

Azure Traffic Manager

#AzConfDev

Azure Traffic Manager

Allows you to control the distribution of user traffic

Service endpoints:

- Azure VMs
- App Service
- External endpoints

Azure Traffic Manager - Benefits

Improve availability of critical applications

Improve responsiveness for high-performance applications

Perform service maintenance without downtime

Combine on-premises and Cloud-based applications

Distribute traffic for large, complex deployments

Configure Azure Traffic Manager

Create a Traffic Manager profile

Choose a load-balancing method:

Geography

Priority

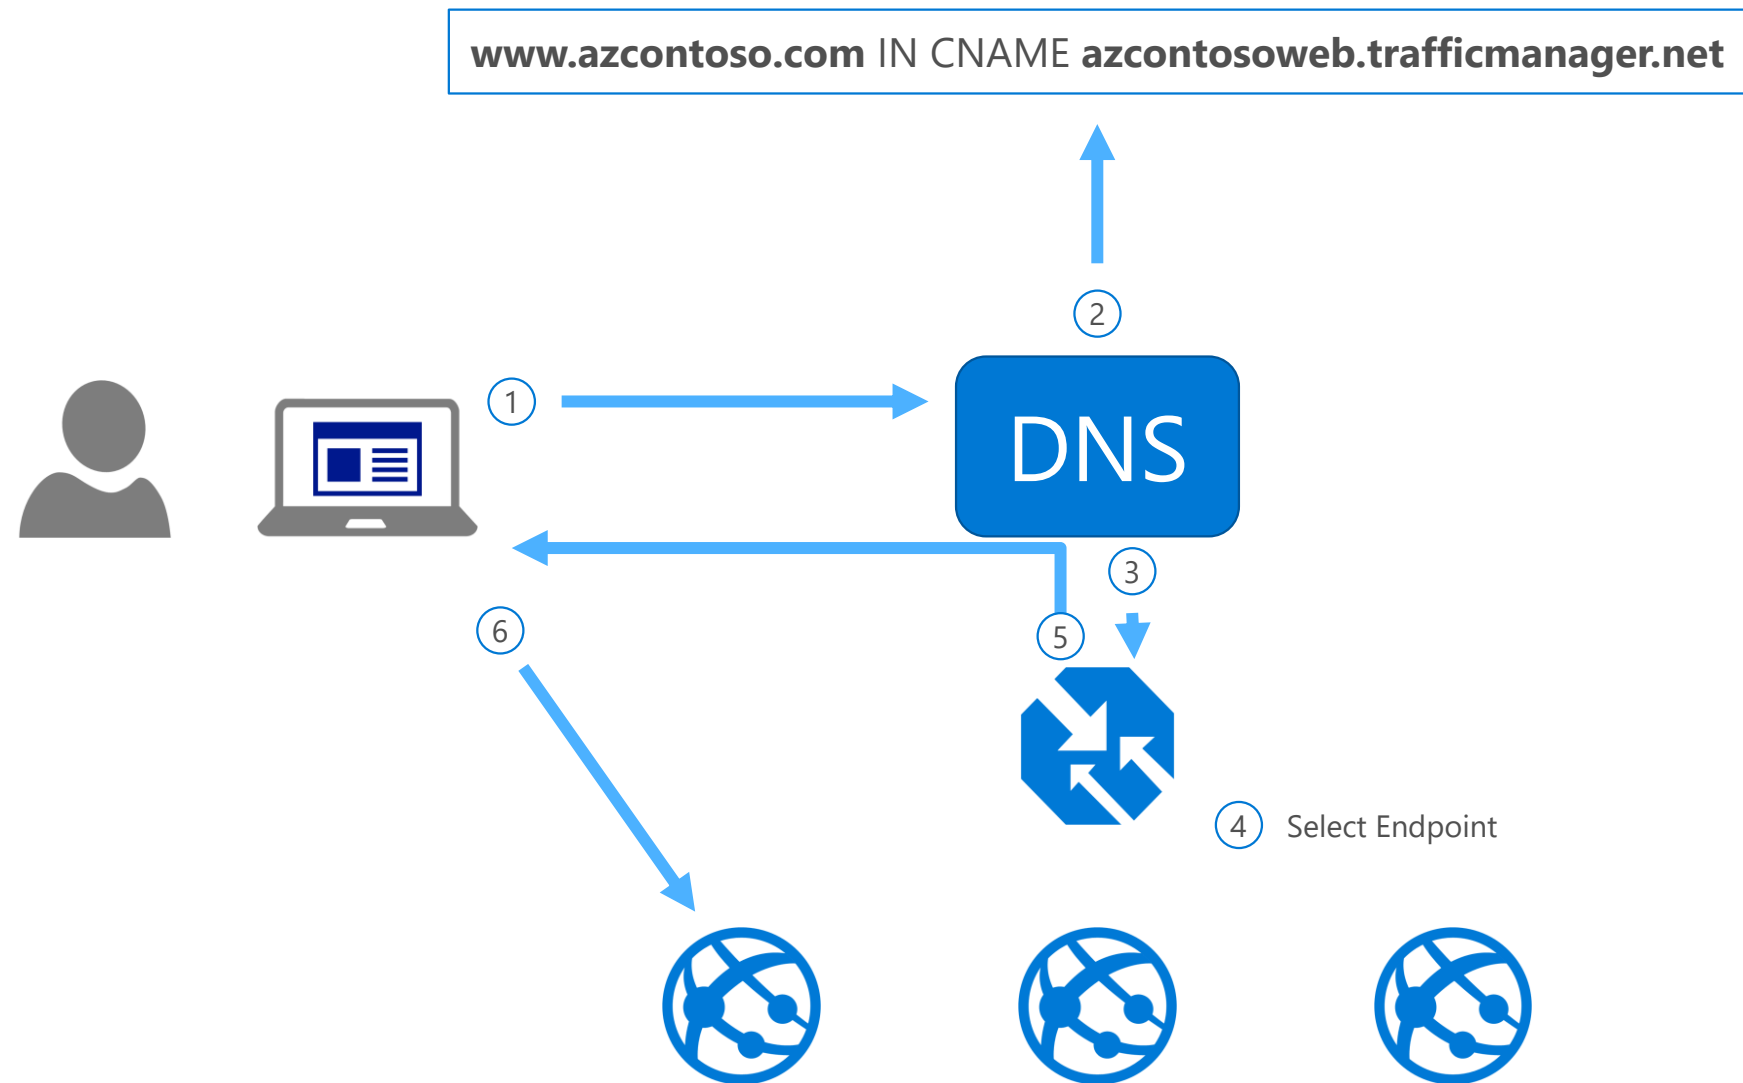

Performance

...

Add endpoints to the Traffic Manager profile

Add a DNS CNAME record point to Azure Traffic Manager endpoint

Azure Traffic Manager

Azure Traffic Manager - Failover

Traffic Manager – Geography / Performance

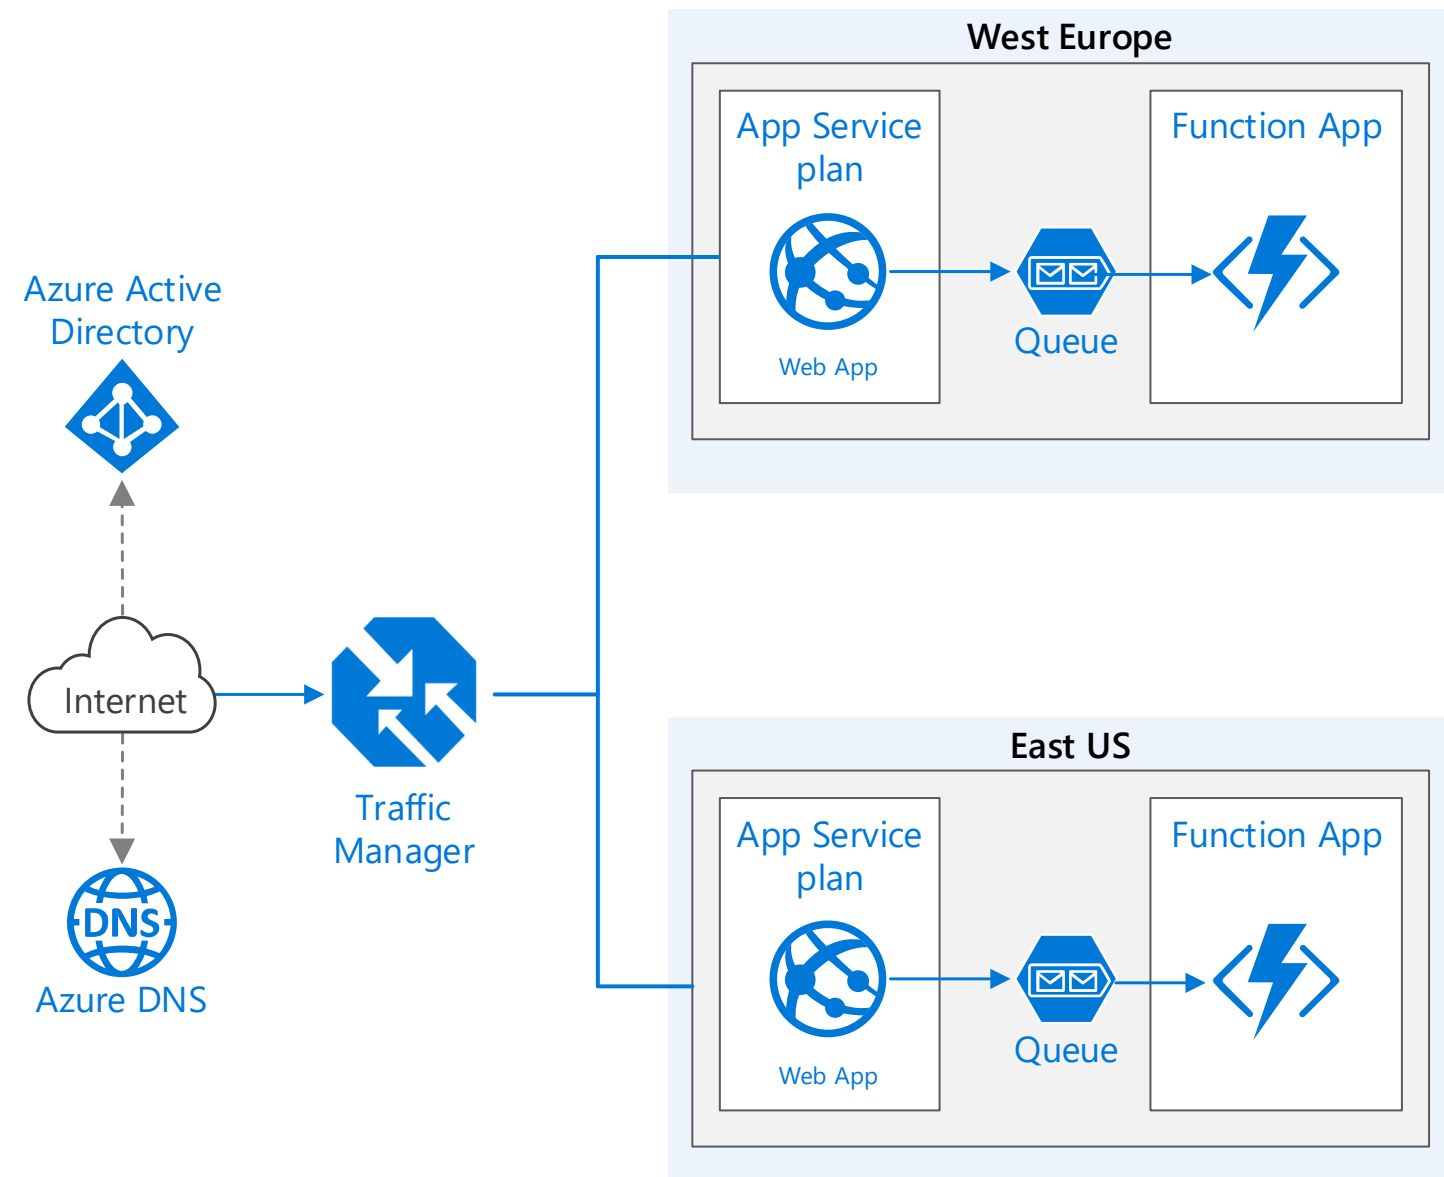

Demo

Azure Traffic Manager

Current Status

Azure CDN

#AzConfDev

Azure CDN

Serve content from Azure Storage / Cloud Services / App Services / ...

Separate hostname

Several POP locations

DNS anycast to get content closer to users

Azure CDN - Overview

1. CDN endpoints are globally distributed:
 1. Microsoft
 2. Verizon
 3. Akamai Networks
2. Data from Azure Storage is cached at each CDN endpoint
3. Users access data from their closest CDN endpoint
4. If data is not available at a CDN endpoint, Azure retrieves it from the origin and caches it at the CDN endpoint

Azure CDN

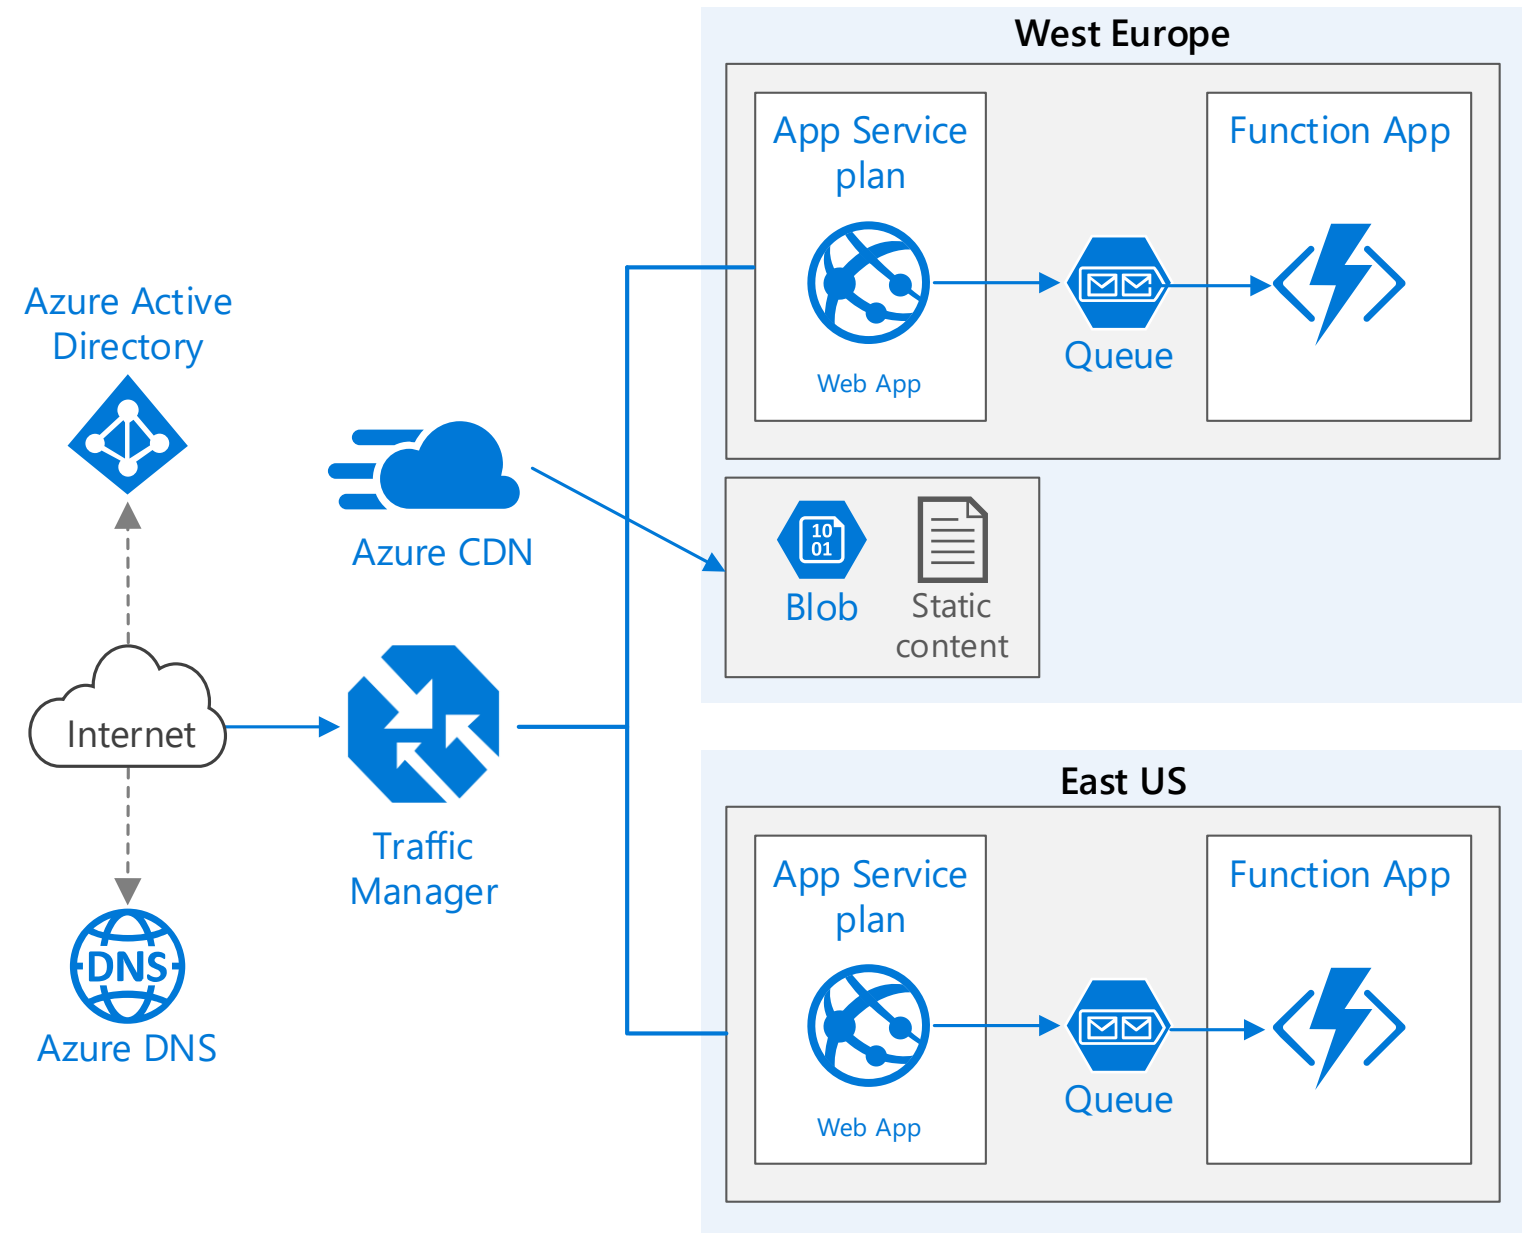

Demo

Azure CDN

Current Status

Other services

Azure Storage

Azure Functions

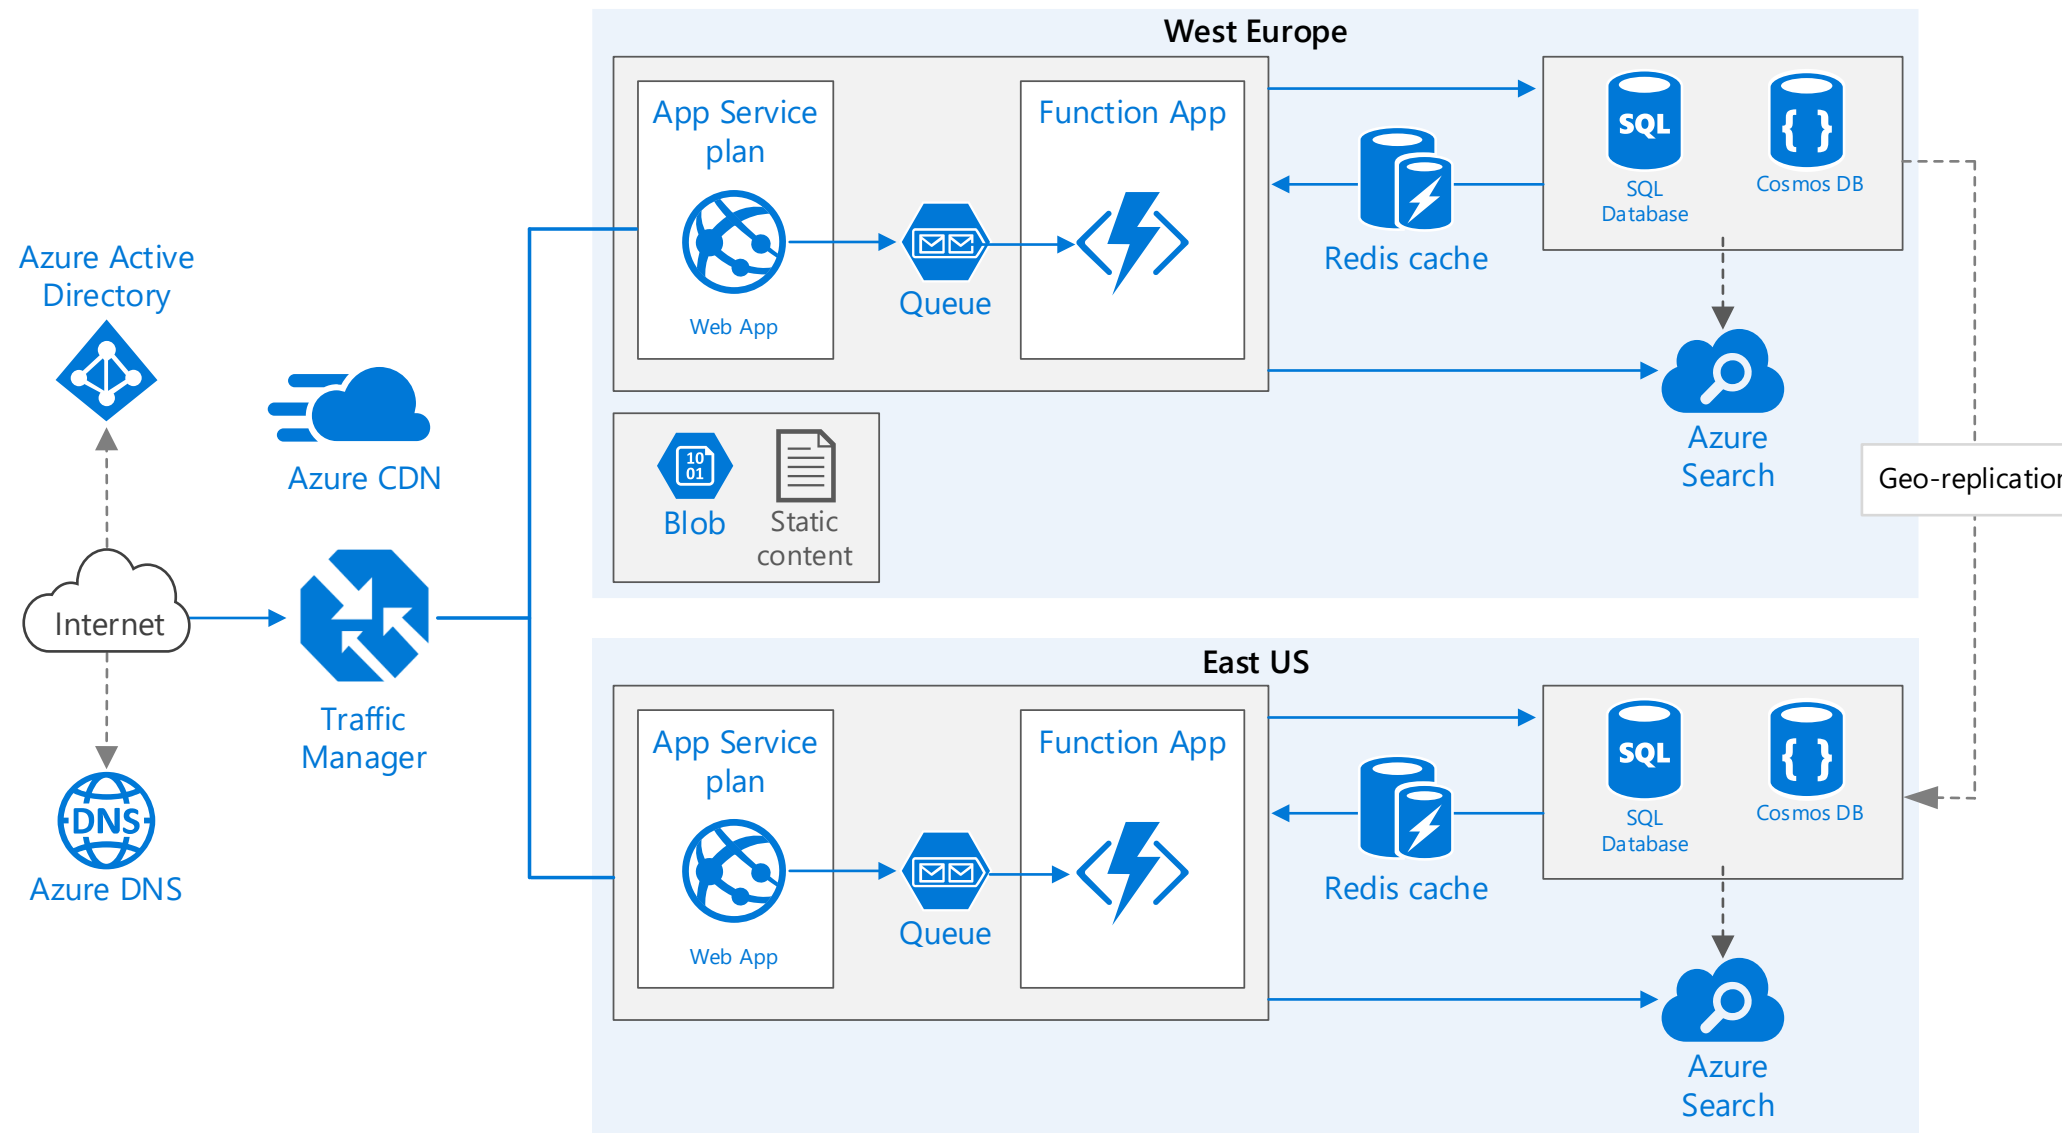

Azure Redis Cache

Cosmos DB / SQL Databases

Azure Search

Azure Front Door
